

STAKEHOLDER MAPPING

What

Stakeholder mapping identifies the key individuals and teams who interact with, manage, approve, or are affected by the Automated Network Request Management solution.

The primary stakeholders are:

- End Users (Requesters)
- IT Administrators
- Network Fulfilment Team
- Approvers

Understanding their roles, expectations, and impact is essential for designing a solution that satisfies both business and technical requirements.

Why

Different stakeholders interact with the network request lifecycle in different ways. Mapping their responsibilities and expectations helps ensure that the ServiceNow solution provides the appropriate functionality for each group.

The automation should reduce unnecessary manual work for IT teams while giving requesters better visibility and ensuring that approvers can enforce organizational policies.

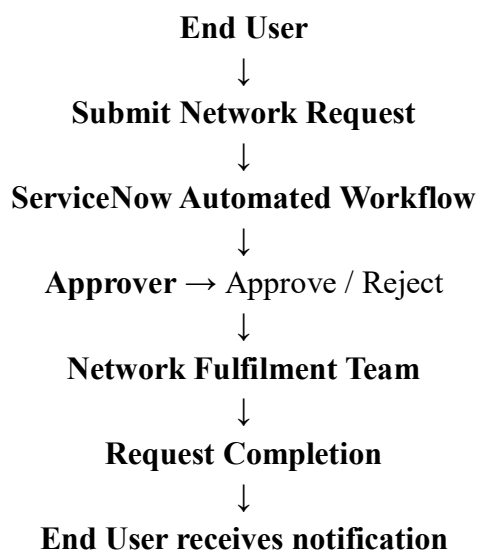

Stakeholder Mapping

Stakeholder	Role	Needs / Expectations	Impact of Automation
End Users (Requesters)	Employees or teams requesting network services through the Service Portal	Simple and intuitive request submission, fast turnaround, and request-status visibility	Faster request fulfilment and improved visibility through the ServiceNow portal
IT Administrators	Manage ServiceNow configurations, workflows, and related platform functionality	Reliable automation, minimal manual intervention, and easy maintenance/change management	Reduced administrative workload and easier maintenance of workflows and configurations
Network Fulfilment Team	Executes network-related requests and	Complete and accurate request information, fewer	Automated task generation, reduced human error, and more

Stakeholder	Role	Needs / Expectations	Impact of Automation
	ensures infrastructure reliability	manual activities, and standardized processes	time to focus on complex network issues
Approvers	Managers or compliance personnel responsible for authorizing requests	Policy enforcement, quick decision-making, and structured approval processes	Automated approval routing, consistent policy enforcement, and improved auditability

Stakeholder Responsibilities in the Request Lifecycle

The stakeholder interaction can be represented as:

Outcome

The stakeholder mapping establishes clear responsibilities and expectations for each participant in the network request lifecycle.

The resulting ServiceNow solution will:

- Provide **simple request submission** for end users.
- Reduce **manual administration** for IT administrators.
- Provide **structured and automated fulfilment tasks** for the network team.
- Enable **controlled and auditable approvals** for managers and compliance personnel.
- Improve communication and visibility across the complete request lifecycle.
