

UI POLICY

What

A Catalog UI Policy is configured for the Network Request catalog item to dynamically control the visibility of fields based on the user's selections.

In this implementation, when the user selects:

Type of Connection = Existing

the Enter your Existing ID field becomes visible.

This provides a dynamic form experience where users see only the information relevant to their selected request type.

Why

Displaying all fields at once can make a catalog form confusing and unnecessarily lengthy.

The UI Policy improves the request form by:

- Showing relevant fields only when required.
- Reducing unnecessary user input.
- Improving form usability.
- Preventing irrelevant information from being entered.
- Supporting conditional data collection.
- Making the request process more intuitive.

Activity 1 – Create Catalog UI Policy

What

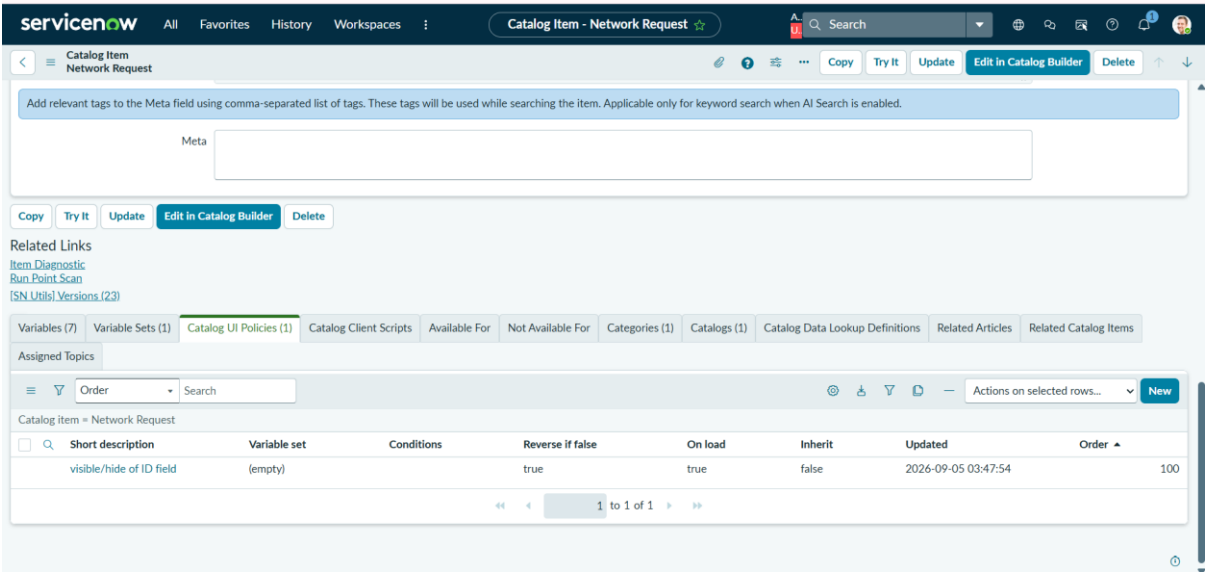

Create a Catalog UI Policy for the **Network Request** catalog item.

How

1. Navigate to the Network Request catalog item.
2. Open the catalog item's related lists.
3. Locate Catalog UI Policies.
4. Click New.
5. Configure the UI Policy.

Use the following configuration:

Field	Value
Applies to	Catalog Item
Catalog item	Network Request
Short description	Display Existing ID for Existing Connection
Condition	Type of Connection is Existing
- Review the condition. - Click Submit/Save.	

Activity 2 – Configure UI Policy Action

What

Configure a Catalog UI Policy Action to determine which field is displayed when the UI Policy condition evaluates to true.

How

After saving the UI Policy:

- Open the newly created UI Policy.
- Locate the Catalog UI Policy Actions related list.
- Click **New**.
- Select the variable:

Enter your Existing ID

- Set:

Visible = True

6. Configure other properties according to the requirement.
7. Save the UI Policy Action.

Configuration

Property	Value
Variable	Enter your Existing ID
Visible	True
Mandatory	As required
Disabled	As required

Catalog UI policies are similar to standard UI policies. Catalog UI policies dynamically change variables that are part of a catalog item or change how variable sets are handled. Policies can also be applied when the variables are present in a Requested Item or Catalog Task form. [More Info](#)

Applies to: A Catalog Item Application: Global

* Catalog item: Network Request Active: ☒

* Short description: visible/hide of ID field

When to Apply Script

Catalog UI policy actions are applied only if all the following conditions are met:

1. The catalog UI policy is **Active**
2. The items in the **Conditions** field evaluate to true
3. The field specified in the catalog UI policy is present on the specified catalog item

Catalog Conditions: Add Filter Condition Add OR Clause

type_of_connection is Existing AND OR

Applies on a Catalog Item view ☒

Applies on Catalog Tasks ☒

Applies on Requested Items ☒

On load ☒

Apply the catalog UI policy actions when the form is loaded or when the user changes values on the form

Reverse the effects of the catalog UI policy actions when the Conditions evaluate to false

Activity 3 – Test the Conditional Behavior

What

Test the Network Request catalog form to verify that the UI Policy dynamically displays the Existing ID field.

How

1. Open the Network Request catalog item from the Service Portal.

2. Locate Type of Connection.
3. Select:
Existing
4. Observe the form.

The Enter your Existing ID field should become visible.

Catalog UI Policy
visible/hide of ID field

Applies to: A Catalog Item
* Catalog Item: Network Request
* Short description: visible/hide of ID field

Application: Global
Active: ☒

When to Apply | Script

Catalog UI policy actions are applied only if all the following conditions are met:

1. The catalog UI policy is **Active**
2. The items in the **Conditions** field evaluate to true
3. The field specified in the catalog UI policy is present on the specified catalog item

Catalog Conditions: Add Filter Condition Add OR Clause
type_of_connection is Existing AND OR X

Applies on a Catalog Item view ☒
Applies on Catalog Tasks ☒
Applies on Requested Items ☒

Apply the catalog UI policy actions when the form is loaded or when the user changes values on the form
On load ☒
Reverse the effects of the catalog UI policy actions when the Conditions evaluate to false

Validation

Perform both test scenarios:

Test Case	Selection	Expected Result
TC-UI-01	Type of Connection = New	Existing ID field remains hidden
TC-UI-02	Type of Connection = Existing	Existing ID field becomes visible

If the policy is configured correctly, the behavior should be:

New → Existing ID hidden

Existing → Existing ID visible

Outcome

The Catalog UI Policy introduces conditional behavior into the Network Request form.

When a user selects Existing as the connection type, ServiceNow automatically displays the Enter your Existing ID field. When another connection type is selected, the field remains hidden.

This results in a cleaner, more intuitive, and context-aware request form while ensuring that additional information is collected only when it is relevant.
